A Message from Our President

Trudell Medical UK Limited's (TMUK) mission is to help respiratory patients breathe better and live fuller lives. In the fight against 2019 Novel Coronavirus (COVID-19) our thoughts are with those individuals and families whose lives have been affected and with those healthcare professionals providing essential care in these unprecedented times.

At the time of writing this the UK government has advised 1.5 million people with serious health conditions to remain at home to stay safe for the next 12 weeks. Groups being shielded include people with severe respiratory conditions including cystic fibrosis, non-cystic fibrosis bronchiectasis, severe asthma and severe COPD.

To ensure we can continue fulfilling our mission, we are focused on the following top priorities:

1. Protecting the safety and wellness of our employees. Several measures are already in place and more are added based on new guidance or changing circumstances. Existing measures include:
 - Education and information sharing regarding symptoms and infection control practices
 - Suspension of all business-related travel
 - Restriction and screening of all visitors to all our facilities
 - Enabled work from home for as many people as possible whilst safely maintaining business continuity

2. Maintaining product supply to our patients and customers. We are in weekly discussions with our supply chain to assess the potential impact of COVID-19 and to take appropriate actions to mitigate risks as they emerge. Our global manufacturing operations have changed shift patterns to support social distancing in order to minimize potential disruptions to planned production levels.

To support efficient ordering of our medical devices please refer to the list of product order codes and contact details for our UK wholesalers and distributors at the end of this message.

3. Providing critical support for healthcare professionals treating patients remotely. We will, for example, be offering visual guides to support optimal inhaler and valved holding chamber/spacer technique that can assist with remote patient reviews and consultations. These tools will be open access and made available to all HCPs in need. For updates, please contact your local Trudell Medical UK Limited representative, email our Medical Information Team via info@trudellmedical.co.uk or visit our Website, www.trudellmedical.co.uk

Finally, as the situation is fluid, our Global Leadership Team has established a Taskforce to monitor and respond to the evolving COVID-19 situation. This Taskforce meets daily and takes action as necessary to keep our employees safe and to maintain an uninterrupted supply of our essential medical devices for our patients and healthcare providers.

Gerald Slemko
